Dear Patients!

Please don't be fooled by second-rate thermography that only uses color pictures and no black-and-white pictures. Black-and-white pictures are critical for viewing blood vessel patterns which can only be read by a skilled interpreter who has been mentored. It is very easy to use a print-and-click software program to read temperatures, but it is very difficult to interpret blood vessel patterns.

Ask your Thermography Center these questions:

1. Do you take black-and-white pictures AND color pictures?
2. How often is your camera calibrated for temperature accuracy and is it an FDA approved camera?
3. Does your interpreter sign your report with his or her name?
4. Is your thermography center associated with a board licensed professional (Chiropractor, Naturopath, Acupuncturist or MD)?
5. Is the technician certified?

The standard of excellent care requires all of the above!
